

THE LAYER BETWEEN YOUR CONTENT AND THE AI THAT READS IT

Get paid when AI uses your content.

BRIP lets publishers set machine-readable rules for how AI may use their work, gives AI companies clean licensed access, and produces a tamper-proof, independently verifiable record of every use — so licensing can actually be enforced and settled.

The problem today: AI systems read, answer with, and train on publisher content at scale — with no agreed rules, no record of what was used, and no payment. Terms of service are unenforceable and invisible to machines. Publishers can't monetize it; AI companies can't prove they complied.

HOW IT WORKS

1

Set terms once

Declare what AI may do — and your price — in plain, machine-readable form.

2

AI gets a pass

A short-lived signed token binds the AI to exactly those terms.

3

Every use logged

Each access is written to a tamper-proof ledger — provable, not "trust us."

4

You get paid

Usage is metered and settled automatically. BRIP never holds your funds.

PROOF, NOT PROMISES

- ✓ **A signed receipt for every use.** Each consumer and period gets a provenance certificate backed by a cryptographic ledger.
- ✓ **Tamper-evident.** Altering the record breaks the seal — and it's detectable to the exact entry.
- ✓ **Independently verifiable.** A regulator or auditor can check it without trusting BRIP.
- ✓ **Open standards.** RSL licensing terms and standard signatures — no lock-in.

Provenance certificate

● VALID

publisher	nzz.ch

WHO IT'S FOR

FOR PUBLISHERS

Turn AI scraping into revenue

Your content already trains and answers. Set terms and get a licensed, auditable revenue stream instead of an uncompensated leak.

FOR AI COMPANIES

License cleanly, prove compliance

Unambiguous machine-readable rights plus a signed record you stayed within them — defensible by design.

- Working end-to-end
- Verification
- Signed access tokens
- Tamper-proof audit ledger
- Provenance certificates
- Automated settlement

See it on your own content.

We'll show licensing, verification, and settlement end to end.
